# QuantifiedSelf App

Problem definition

Modern Application Development - I

Last Updated at : 2021-02-17T23:04:00.00+5:30

#### Frameworks to be used

- Flask for application code
- Jinja2 templates + Bootstrap for HTML generation and styling
- SQLite for data storage
- All demos should be possible on a standalone platform like replit.com and should not require setting up new servers for database and frontend management

#### QuantifiedSelf

- Used for self tracking tracking habits, activities, other life parameters etc.
- User can have multiple trackers
- Each tracker will have a
  - o ID
  - Name
  - Description
  - Tracker type
  - Settings
- User can log to one more tracker at any time, each time it's logged it will capture
  - TimeStamp
  - Tracker
  - Value (based on the corresponding tracker type)
  - Note
- System will track progress over time and shows graphs trend lines etc

#### Terminology

- Tracker Corresponding to the
- TrackerType Type says what data is captured
  - Numerical
  - Multiple Choice
  - Time Duration
  - Boolean
- Logging Logging an event to a tracker by providing values
- Trendline Shows the list of logged events and may be graphs

#### Reference Material

- Quantified Self on Wikipedia
- Quantified Self Awesome List Curated by public

#### Similar Products in the Market

  - o Open Source
  - Command Line

- These are meant for exploring the idea and inspiration
- Don't copy

# Example - Temperature Tracker

- Can be used to log daily temperature by covid patients
- Tracker
  - ID : PK : tracker1
  - Name: Temperature
  - Description: Tracking body temperature in Fahrenheit
  - TrackerType: Numerical

- Users can log at any time of the day.
- Example log 1
  - TimeStamp:"2022-05-26T11:42:00.73+05:30"
  - Tracker: tracker1
  - Value: 98.3
  - Note : I was feeling okay
- Example 2
  - TimeStamp : "2022-05-27T10:42:00.73+05:30"
  - Tracker: tracker1
  - Value: 100.1
  - Note: Feeling tired and bit feverish

## Example - Running Tracker

- Can be used to log daily running by anyone
- Tracker
  - ID : PK : tracker2
  - Name: Running
  - Description: Tracking daily running in kilometers
  - TrackerType: Numerical

- Users can log at any time of the day.
- Example log 1
  - TimeStamp: "2022-05-26T11:42:00.73+05:30"
  - Tracker: tracker2
  - Value : 5
  - Note: It was a good run. Felt a little tired but okay.
- Example 2
  - TimeStamp: "2022-05-27T10:42:00.73+05:30"
  - Tracker: tracker2
  - Value : 2
  - Note: Couldn't run much today
- Example 2
  - TimeStamp: "2022-05-27T18:42:00.73+05:30"
  - Tracker: tracker2
  - Value : 3
  - Note: Making up because couldn't run in the morning

## Example - Mood Tracker

- Can be used to log mood multiple times a day
- Tracker
  - ID : PK : tracker3
  - Name: My Mood
  - Description: Tracking my mood multiple times a day
  - TrackerType: Multiple Choice
  - Settings: Angry, Sad, Happy, Calm, Okay, Meh

- Users can log at any time of the day.
- Example log 1
  - TimeStamp: "2022-05-26T11:42:00.73+05:30"
  - Tracker: tracker3
  - Value : Angry
  - Note: Not sure why, but I was angry
- Example 2
  - TimeStamp: "2022-05-27T10:42:00.73+05:30"
  - Tracker: tracker3
  - Value : Happy
  - Note: Good food and hence happy
- Example 2
  - TimeStamp: "2022-05-27T18:42:00.73+05:30"
  - Tracker: tracker3
  - Value : Calm
  - Note: Meditation did the trick

# Core Functionality

- This will be graded
- Base requirements:
  - User login
  - Dashboard and Trendlines
  - Tracker management
  - Tracker log events

## Core - User Login

- Form for username (and optional password)
- You can either use a proper login framework, or just use a field for username we are not concerned with how secure the login or the app is
- Suitable model for user

#### Core - Dashboard

- Dashboard with list of trackers
- Time of last review, value on tracker
- Ability to go to logging view for any tracker
- Ability to go to create or edit tracker
- Ability to go the specific tracker details

# Core - Tracker management

- Create a new tracker
  - Storage should handle multiple languages usually UTF-8 encoding is sufficient for this
- Edit a tracker
- View Tracker
  - View tracker
  - View logs related to that tracker
  - View stats and trendlines
- Remove a tracker

# Core - Logging

- Click on a tracker, then log the values
  - Based on the TrackerType it should show the options to log
    - Numerical Show the text box that takes numerical values only
    - MultipleChoice present the options
    - Time Duration Give the ability to select time duration, like 30 mins, 1 hr 29 mins etc.
  - The current timestamp needs to be picked up automatically. But the user should have the ability to edit
- Edit a log
  - Change value, timestamp or associate notes
- Remove a log

# Example Wireframe

- Click this <u>link</u> to check the wireframes
- It is just given to gain a basic understanding, and not meant to be followed exactly

#### Recommended (graded)

- APIs for interaction with trackers and logs
  - CRUD on tracker
  - CRUD on the tracker log event
  - Additional APIs for getting stats, trend lines or add other features

#### Validation

- All form inputs fields text, numbers etc. with suitable messages
- Backend validation before storing / selecting from database

# Optional

- Styling and Aesthetics
- Proper login system
- Export/Import logs, so it can be analyzed in Excel or Calc

#### **Evaluation**

- Report (not more than 2 pages) describing models and overall system design
  - Include as PDF inside submission folder
- All code to be submitted on portal
- A brief (2-3 minute) video explaining how you approached the problem, what you have implemented, and any extra features
  - This will be viewed during or before the viva, so should be a clear explanation of your work
- Viva: after the video explanation, you are required to give a demo of your work, and answer any questions
  - This includes making changes as requested and running the code for a live demo
  - Other questions that may be unrelated to the project itself but are relevant for the course

#### Instructions

- This is a live document and will be updated with more details and FAQs, as we proceed.
- We will freeze the problem statement on or before 23rd February, beyond which any modifications to the statement will be communicated via proper announcements.
- The project has to be submitted as a single zip file.
- The last date for submission is 18th March. This is a hard deadline and NO extensions will be possible.
